

COLOUR

When banks say no, green says go. It's energetic and vibrant, just like the world we live in. And it's our primary colour, supported by a lively secondary palette that's as at home on buttons, as it is on billboards.

CORE COLOURS

As far as the public's concerned, Wise is green. But to us, it's Bright Green, Forest Green, and white with an 8% Forest Green tint thrown in.

Bright Green

HEX: #9FE870

RGB: 159 / 232 / 112

CMYK: 47 / 0 / 72 / 0

PMS: PANTONE 7487

Forest Green

HEX: #163300

RGB: 22 / 51 / 0

CMYK: 54 / 0 / 100 / 80

PMS: PANTONE 2411

SECONDARY COLOURS

Being the global business that we are, our secondary palette is inspired by the vibrant and energetic colours found around the world.

The more we get to know people, the more we show our secondary palette. Think of it as a visual metaphor for getting closer, and more comfortable.

Bright Orange

HEX: #FFC091

RGB: 255 / 192 / 145

CMYK: 0 / 40 / 50 / 0

PMS: PANTONE 163

Bright Yellow

HEX: #FFEB69

RGB: 255 / 235 / 105

CMYK: 2 / 0 / 65 / 0

PMS: PANTONE 113

Bright Blue

HEX: #A0E1E1

RGB: 160 / 225 / 225

CMYK: 45 / 0 / 10 / 0

PMS: PANTONE 310

Bright Pink

HEX: #FFD7EF

RGB: 255 / 215 / 239

CMYK: 0 / 30 / 0 / 0

PMS: PANTONE 671

Dark Purple

HEX: #260A2F

RGB: 38 / 10 / 47

CMYK: 100 / 100 / 0 / 59

PMS: PANTONE 5255

Dark Gold

HEX: #3A341C

RGB: 58 / 52 / 28

CMYK: 33 / 43 / 80 / 66

PMS: PANTONE 448

Dark Charcoal

HEX: #21231D

RGB: 33 / 35 / 29

CMYK: 54 / 27 / 36 / 82

PMS: PANTONE 446

Dark Maroon

HEX: #320707

RGB: 50 / 7 / 7

CMYK: 47 / 85 / 55 / 59

PMS: PANTONE 4975

Using secondary colours

Always start and end with green. It's our first impression and our bye for now.

But introduce the secondary palette when green is nicely established. So the further someone gets through say, an Instagram story, the more you can dial it up.

- ✓ Secondary palette introduced in the middle of an Instagram story.

Logos in secondary colours

When deep into a marketing application, you can also apply our secondary palette to our logo. If it feels appropriate.

TYPE AND COLOUR

Our colour combos are purposefully complementary, striking, and accessible. They were made to match up, so let's keep them that way.

Go to [typography guidelines](#).

PRODUCT COLOURS

Content colours

Our content colours are based on neutral greys, with a small percentage of green. This creates a clear and accessible visual hierarchy, and makes us distinct by adding hints of our brand colours.

Content Primary

HEX: #0E0F0C

RGB: 14 / 15 / 12

Content Primary

Use to emphasise primary content in relation to other elements nearby.

Content Secondary

HEX: #454745

RGB: 69 / 71 / 69

Content Secondary

Use for most body text, and in supportive elements that give context to content that's close to it.

Content Tertiary

HEX: #6A6C6A

RGB: 106 / 108 / 106

Content Tertiary

Use in form inputs for placeholders, and for the label that says a field is 'Optional'.
Avoid using elsewhere.

Content Link

HEX: #163300

RGB: 22 / 51 / 0

Content Link

Use for links and for external link icons that appear in line with link text.

Interactive colours

Our interactive colours are used in interactive components and icons.

Primary and accent colours use the core brand colours to stand out. The secondary and tertiary colours are more neutral, to support the visual hierarchy of the screen.

Interactive Primary

HEX: #163300

RGB: 22 / 51 / 0

Interactive Primary

Conveys interactivity. Use for neutral interactive elements, or for emphasising active items within an interactive list.

Interactive Accent

HEX: #9FE870

RGB: 159 / 232 / 112

Interactive Accent

Use sparingly as a pop of accent colour in interactive elements. For example, the background for primary buttons.

Interactive Secondary

HEX: #868685

RGB: 134 / 134 / 133

Interactive Secondary

Use for de-emphasised interactivity, like the borders on inputs and checkboxes, and the clear button on a search input. Do not use on text.

Interactive Control

HEX: #163300

RGB: 22 / 51 / 0

Interactive Control

Use in components for text and icons that sit on a Bright Green Interactive Accent surface colour. This keeps them visible when users switch to dark mode. Can also be used for surfaces if needed.

Interactive Contrast

HEX: #9FE870

RGB: 159 / 232 / 112

Interactive Contrast

Use in components for text and icons that sit on a Forest Green Interactive Primary surface colour. This keeps them visible when users switch to dark mode.

Background colours

Background colours are used for larger surface areas that are light enough to be overlayed with content and other components.

Background Screen

HEX: #FFFFFF

RGB: 255 / 255 / 255

Background Screen

The lowest level background used in most screens.

Background Elevated

HEX: #FFFFFF

RGB: 255 / 255 / 255

Background Elevated

Use for elevated surfaces that partially show the content behind it, like bottom sheets and sidebars.

Background Neutral

HEX: #16330014

RGBA: 22 / 51 / 0 / 0.08

Background Neutral

Use for delineating areas without using borders, like neutral alerts and avatars.

Background Overlay

HEX: #16330014

RGBA: 22 / 51 / 0 / 0.08

Background Overlay

Use for faintly darkening an area, for example on loading shimmers.

Border colours

We use border colours to subtly separate different blocks of content.

Border Neutral

HEX: #0E0F0C1F

RGBA: 14 / 15 / 12 / 0.12

Border Neutral

Use in most separators, for example in the section header and tabs components.

Border Overlay

HEX: #0E0F0C1F

RGBA: 14 / 15 / 12 / 0.12

Border Overlay

Use on the edges of images to differentiate them from the background, such as flags in avatars.

Sentiment colours

Our sentiment colours are used to indicate positive, negative, or warning.

They're needed in components like alerts and error messages. But it's best to avoid using them elsewhere on screens where possible. If you need to emphasise text, it's better to use bold and the Content Primary instead.

Sentiment Negative

HEX: #A8200D

RGB: 168 / 32 / 13

Sentiment Negative

Indicates negative sentiment, for example on error states or destructive actions.
Can be used as text or as a background.

Sentiment Positive

HEX: #2F5711

RGB: 47 / 87 / 17

Sentiment Positive

Indicates positive sentiment, for example in positive alerts. Can be used as text or as a background.

Sentiment Warning

HEX: #EDC843

RGB: 237 / 200 / 67

Sentiment Warning

Indicates warning sentiment, for example on alerts. Should only be used as a background colour and is not accessible as text.

Base colours

Base colours are useful colours that we can use in several different scenarios.

Base Contrast

HEX: #FFFFFF

RGB: 255 / 255 / 255

Base Contrast

Use for copy on negative buttons. Turns dark on dark mode to keep elements visible.

Base Light

HEX: #FFFFFF

RGB: 255 / 255 / 255

Base Light

Use in informational or interactive elements where white is needed, or where other colours would be too prominent in the hierarchy.

Base Dark

HEX: #121511

RGB: 18 / 21 / 17

Base Dark

Use in informational or interactive elements where a dark colour is needed.

Colour balance in product screens

We're not afraid of white space. White is the most prominent colour in our UI and we use it to let screens breathe. We complement the white with our neutral colour, which we use to add warmth and separate elements.

Next up are the content greys, followed by a smaller proportion of Forest Green for interactivity, plus an occasional pop of Bright Green as an accent.

Treat these proportions as a guide, not as hard and fast rules. There's always a degree of flexibility.

THEMING

Our colours work equally well in dark mode.
